

Second Value Campaign

Sustainable AI for **Intermarchē**

By Vinayak Singh

The solution: AI-powered circular ready-to-eat meals from second value fresh food

Intermarché

BUSINESS

Turn unsold fresh food into profitable ready-to-eat meals that drive incremental revenue and basket growth.

SUSTAINABILITY

Reduce food waste and carbon footprint by replacing industrial meals with lower-impact, in-store prepared alternatives.

OPERATIONS/AI

Use AI to pilot inventory, recipes, and daily production with minimal additional operational complexity.

Turning 2nd value food into a high-margin revenue stream

Core Logic

My model transforms an existing loss into a new revenue stream by:

1. Revalorizing unsold fresh products
2. Transforming them into ready-to-eat meals
3. Selling them at market-aligned prices
4. Leveraging proximity and trust as differentiation

No new raw material cost

Only transformation cost

Production Costs

For 200g per portion :

- Unsold food → **0€ marginal cost**
- Labor + Packaging + energy + buffer → **~2€ total cost**

Selling price **€3.30–€3.40**

Target margin: **~30%**

€1.00–€1.30 gross margin per portion
35–40% incremental margin

Revenues

Store Benchmark :

- Average price in store today: **€3.31**
- Target margin: **~30%**

Gross margin per portion ≈ €1.00–€1.30
~35–40% incremental margin

Annual projection (conservative) :

- 30 portions/day × 300 days = **9,000 portions/year**

€10k–15k gross profit / recipe / store
Scalable across categories

Investment needed

- AI decision-support tool → €15,000
- Staff training & change → €5,000
- Light setup → €5,000

Total initial investment ≈ 25,000
Recurring maintenance: ~€5,000/year

ROI

- Waste reduction → **€30–40k/year**
- Anti-waste margin → **€15–25k/year**

Total annual impact: €45–65k
Payback: 12–18 months / ROI: 1,28%

Time-poor, price-sensitive customers looking for healthy convenience

Lisa, 34

Single mother • Hospitality worker • Intermarché Drive user

📍 Lives <2 km from store

Negative trends

- Shrinking purchasing power
- Lack of time

Positive trends

- Zero waste
- Community retail

Needs

Affordable,
healthy meals

PAIN POINTS

- Relies on **fast food** too often
- **Fresh food perceived as expensive**
- **Stress** from daily meal planning
- **Guilt** about kids' eating habits

VALUE DRIVERS

- **Ready-to-eat**, time-saving meals
- Trust in **freshness** and **traceability**
- **Affordable** price point
- **Simple availability** via Intermarché Drive

Sustainability Impact: Turning waste into carbon savings

Carbon impact

1. Waste avoided

(less destruction = less upstream emissions wasted)

2. Substitution effect

(our meals replace industrial ready-meals)

Key success factor

Becoming a substitute to industrial ready-meals → CO₂ reduction

Local anti-waste meals → replace → industrial prepared meals
(short supply chain, no factory process, no long-distance transport)

Estimated CO₂ savings per year (Darnétal) ≈ 1,8 ton of CO₂ avoided / year

KPI	Without AI	With AI
Meals produced/day	30	36
Avg meal weight	200g	200g
Days/year	300	300
Net difference : industrial vs. local meal	~0.2 kg CO ₂ /meal	~0.2 kg CO ₂ /meal
Net CO ₂ saved	1,8t	2,2t

Equivalent impact

2 Paris–Marseille flights (~1.2 tCO₂/flight)

11,000 km driven by a car (~0.2 kgCO₂/km)

1 household electricity / 6 months
(~4.5 tCO₂/household)

Budget and deployment of an AI tool of content

AI Implementation – Cost Overview

Initial Investment : ~ €15,000

Expert-based estimate

Competitive market pricing

Moderate complexity

Recurring Costs

Maintenance & updates → **€400- €700/month**

Usage-based micro-fees (per API request) → Less than one cent per 100 requests

Roadmap

MONTH 1-3

- Waste & revenue baseline
- Product & risk validation
- Store team insights

MONTH 4-6

- Operating model design
- Pricing & recipes setup
- KPI & training preparation

MONTH 7-9

- Pilot counter launch
- Track waste, margin, demand
- Adjust volumes & pricing

MONTH 10-12

- Category expansion
- Operations optimization
- ROI & playbook

Outlook

A large, three-dimensional white sign on a red background. The sign reads "LED RIVE InterMARCHÉ" in a stylized font. The word "LED" is in a smaller font, followed by "RIVE" in a larger font, and "InterMARCHÉ" in a script-like font. The sign is mounted on a red wall, and the background is a clear blue sky.

LED RIVE InterMARCHÉ

Thank you

Appendix

Stakeholder Overview

Internal Stakeholders

Stakeholder	Interest	Power	Key issues
Store owner (Virginie Decoen)	Very high	Very high	Profitability, simplicity, ROI
Department managers	High	Medium	Workload, waste, performance
Employees (shelf staff, fresh, Drive)	High	Low	Scheduling, physical strain, stability
Support functions (finance, HR)	Medium	Medium	Automation, data reliability

External Stakeholders

Stakeholder	Interest	Power	Key issues
In-store customers	High	High	Price, speed, freshness
Drive customers	High	High	Simplicity, availability
Local suppliers	Medium	Low	Volumes, predictability
ITM Group (IT / Data)	Medium	High	Data governance
Local authorities	Low	Medium	Local employment, carbon impact
Competitors (Lidl, Leclerc)	—	High	Price pressure & usage

Challenge & Value Proposition

Challenge Question:

How might Intermarché Darnétal recover lost revenue by turning food waste into a local competitive advantage through proximity with customers and simple operational transformation?

Value Proposition:

By transforming unsold fresh food into visible, local, ready-to-eat meals, Intermarché Darnétal turns food waste from a hidden cost into a source of trust, differentiation, and profitable growth for local customers and store teams.

Service Blueprint

		Entry & Context	Discovery of the Anti-Waste Offer	Understanding & Reassurance	Purchase Decision	Consumption & Confirmation	Long-Term Relationship
	Customer Emotion	Neutral	Curiosity	Interest → reassurance	Confidence	Satisfaction → pride	Trust → attachment
	Customer actions	Enters store for daily grocery shopping	Notices dedicated anti-waste ready-meal display	Reads labels or asks staff for explanation	Adds anti-waste meal to basket	Consumes product, evaluates quality	Prefers Intermarché for daily shopping
	Touche-points	Store entrance, fresh departments	Anti-waste counter, visual signage	Product labels, employee interaction	Price tag, packaging	Taste, freshness, perceived usefulness	Habit, brand perception
	Frontstage	Store layout highlights freshness and local products	Visible counter with locally prepared ready-to-eat meals	Employee explains local transformation & food safety	Simple pricing, clear value proposition	Positive experience, word-of-mouth	Store seen as smart, local, responsible
	Backstage	Daily overview of fresh stock & at-risk products	Identification of edible D-1 / D-2 products	Standardized preparation & hygiene procedures	Real-time update of sold transformed products	Reduced waste volume, higher margins	Stabilized routines, less emergency waste handling
	Support processes	Daily sales & stock reporting	Waste monitoring rules, selection guidelines	Food safety protocols, staff training	POS system, margin tracking	Waste KPIs, basic customer feedback	Continuous improvement, simple dashboards
